INTERNATIONAL JOURNAL OF QUANTUM CHEMISTRY, VOL. I, 899–902 (1967)

Subject Index, Volume I

Ab initio calculations, 349, 357, 361, 365, 369, 373, 631, 637, 641, 645, 649
Absolute bond strengths, 721
Acetylene, coupling constants, 657
Acetylene molecule, correlation energy of, 653
Adenine, 561
Adiabatic wave functions, 782
AH_n compounds, 17
Alkali hybrid ion, 632
Alternant-molecular-orbital (AMO) method, 841, 847
Antiferromagnetism, 829
Argon, 600
Aromatic hydrocarbons, condensed, 379
Atomic cores, 874
Atomic-orbital bases, choice and definition of, 293
Atomic theory, 47

Be atom, ground state of, 327
Benzene, 357, 591, 841
Benzene-like regions, 379
Biorbitals, Be, 327
Bloch orbitals, 148
Bohr quantum theory, 48
Bond magnetic rotations, 876
Bond rotations in organic molecules, 879
Bonding electrons, 106
Bonding power, 106
Boron and phosphorus bonds magnetic rotations, 879
Born's set of coupled equations, 781, 783
Born–Oppenheimer approximations, 243, 781
Boronitride, 829
Bound states, number of, 535
Brillouin–Wigner perturbation scheme, 769

C-atom, 369
$(CH_3)^+$, 645
CH_4, 373
C_2H_4, 365, 369
C_3H_6, 361, 369
C_5H_5, 369
C_6H_6, 357, 369
$C_5H_5^-$ ion, 349
Charge density, 498
2-Chloropurine, xanthine oxidase-catalyzed reactions of, 699
Clar's theory, 379
Conjugated periodic systems, 451
Collective coordinate, 187
Collective momentum, 187
Collective oscillation, 188
Continued fractions, 769
Correlation effects, 751, 815
  acetylene molecule 653
Correlation energy, 847
  He ground state, 403
  second order, 463
Correlation orbital, first order, 463
Correlation splitting, 852
Cotton–Mouton effect, 595
Coulomb singularities, 809
Coulson–Fischer method, 847
Covalent bond, rotation of, 880
Cusps, 809, 810, 812
Cyclopentadienylanion, 349
Cyclopropan, 361
Cytosine, 561

Degeneracy, local, 535
Delocalized bonds, 874
Density functional representation, 493
Density functions, 421
Density matrix, 675
Diamagnetic susceptibilities, 731, 882
Different orbitals for different spins, 421, 464, 841, 847
Dipole length, 243
Dipole velocity, 243

Electronegativities, 195

Energy-bonding-power, 107
Energy eigenvalue spectroscopy, 271
Ethane, coupling constants, 657
Ethylene, 365
  coupling constants, 657
Evolution operator, 271
Exchange integral, 15
Extended Hartree–Fock approximation, 311, 403, 463

Faraday effect, 874
  systematics of, 881
Fermion–boson scattering, 799
Fermi surface, 157
Fractions, continued, 526
Franck–Condon factors 721
Free-electron model, 591

Gaussian functions, 350, 358, 361, 365, 374, 605, 632, 638, 642, 646, 650
Generating function, 875
Graphite, 427, 829
Green's function, spectral analysis of, 285
Guanine, 561

Harmonic oscillator, 271, 285
Hartree–Fock method, 815
Hartree–Fock procedures, 850
Hartree–Fock–Slater wave functions, 731
He—H system, 14
HMO method, 123, 357, 379, 699
Hybridization, 293
Hydrogen atom, 285, 598
Hydrogen bond, 638, 641, 855
Hydrogen-bonded complex, 855
Hydrogen molecule, 14, 847
Hydrogen molecule ion, adiabatic approximation, 337
Hydroxyl anion, 649

Inelastic collisions, 591
"In–out" correlation, 852
Integrals, one-centre, 149
  two-centre, 150
  three-centre, 149
  two-electron multicentre, 605
Interaction, dipole–dipole, 171
  dipole–octupole, 178
  dipole–quadrupole, 171
  electron–electron, 139
  electron–nucleus, 139
Interaction, long-range, 161, 169
  long-range many-body, 162
  quadrupole–quadrupole, 178
  three-body, 161
  valence, 182
Interatomic effects, 199
Interhalogens, 577
Intermolecular proton transitions, mechanism of, 855
Intraatomic effects, 199
Ionic character, 880
Ionicity, 191
Ionization energy, 141, 193

Kepler problem, 535
Kinetics, 855
Krypton, 595

Lattice, hexagonal close-packed, 148
LCAO–HCO method, 427
LCAO–SCF–CO method, 451
Li^+, 638
Li^-, 632
$(LiH_2)^-$, 631
$(Li_2H)^+$, 637
$(Li_2H)^-$, 641
Ligand orbitals, 205
Linear molecules, 816
Lippmann–Schwinger varational principle, 782
Loge, 874, 881
  core, 875
  functions, 875
Lone pair, 875

Madelung constant, 196
Madelung energy, 153, 191
Magnetic properties of atoms and ions, 731
Magnetic susceptibility, 595
Magneto-optical rotation, 693, 881
Methane, 373
Methyl cation, 645
Modulation function, 809
Molecular additivity rules, 874
Molecular binding energies, 105
Molecular orbitals, 24
Molecular theory, 37
Mulliken-like approximation, 149
Multi-configuration approximation, 312
Multi-configurational interaction method, 850

Natural orbital expansion, 688
  first-order 1/Z perturbation theory of, 463
n-electron bond, 875
Nitrogen, 251
Nitrogen molecular ion, 721
Nitrogen molecule, 693
Non-stationary state, 271
Nuclear magnetic shielding constants, 731
Nucleic acids, 561
Nucleic bases, 124
Number of bound states, 615

$(OH)^-$, 649
One-electron Green function method, 829
Oscillator, anharmonic, 526
Oscillator strengths, 162, 321, 721

Pariser–Parr approximations, 123, 699
Partitioning technique, 799
Perturbation methods, 751
Perturbation theory, second order, 169
π-electron systems, projected electron density method of, 225
Polarizabilities, 595
  π-electron, 189
Polarization, longitudinal, 132
  transverse, 133
Poles, of electron–electron potential, 811
Polyacenes, 427
Polyatomic molecules, spectra of, 217
Polyenes, 427
Polyhalogenoalkanes, 881
Potential energy curves, 251
Programming of SCF method, 605
Projected electron density method, 225
Projected SCF scheme, 403, 463, 421, 849
Promotion of electrons, 104, 293
Pseudopotential, 809

Quantum condition, 47
Quantum numbers, 103
  molecular, 107

Ramsey perturbation formula, 657
Rate constant of the multistep reaction, 855
Reaction matrix, 783
Reaction operator, variational principle for, 781
Reactivity, 379
Refractive index, 161
Resonance scattering, 535
Rotation–vibration lines, 217

ω-SCF–HMO, 699
SCF method, programming of, 605
SCF–MO–LC(LCGO) method, 349, 357, 361, 365, 369, 373, 605, 631, 637, 641, 645, 649
Secular equation, 155
Shockley "subsurface" states, 829
Single configuration approximation, 847
Singularity, simple, 812
